

## Stream T

Highest quality and best productivity merged for  
contactless tunnel inspection

Measurement of tunnel lining thickness, mapping of reinforcing,  
detection of cavities and location of wet areas

Stream T is the revolutionary contactless GPR for tunnel inspection. The contactless feature and modular structure allows this innovative GPR array to easily overcome obstacles often encountered in tunnel survey environments. In addition, it boosts productivity and safety on the work site by using a vehicle to collect data at up to 60 km/h (37.3 mph), without the need to stop traffic. The high-density array of the Stream T provides a high-quality tomography to easily identify tunnel features and critical areas, enabling proactive maintenance of this crucial infrastructure.

## THE BEST-IN-CLASS ARRAY SOLUTION

Stream T is the only turnkey solution on the market for tunnel inspection. It offers a unique multi-channel, multi-frequency and double-polarized lightweight GPR system able to map, both Deep and Shallow tunnel features in only one scan with the highest penetration and resolution at the same time.

## CONTACTLESS DATA COLLECTION

Stream T contactless antenna solution works up to 20 cm from the tunnel surface increasing the acquisition speed (up to 60 Km/h-37.3 mph): productivity increases by 5 times compared to a traditional system. The contactless solution also allows the system to be easily installed on a remote-controlled mechanical arm, increasing operator safety and avoiding operator fatigue.

## MULTIPLE CONFIGURATIONS

Stream T is supplied in 2 different configurations to best meet the inspection and construction site requirements. The Full configuration includes both frequencies for Deep and Shallow monitoring at the same time, while the Mini configuration is optimized for Deep or Shallow survey with a smaller size system. All configurations include a dedicated mechanical frame which can be easily mounted on an extendable telescopic arm to enable rapid and safe surveying of the internal tunnel wall\*.

**Full Configuration**

**\*solution at customer responsibility**

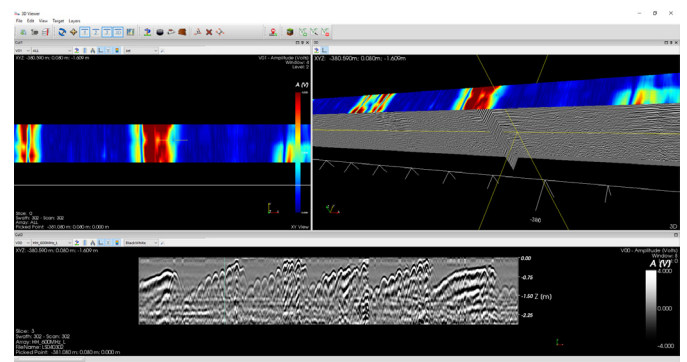

**Mini Configuration  
(Shallow or Deep)**

## 3D DATA PROCESSING

The post-processing software GRED HD 3D CAD allows the user to simply detect and map anomalies in a 3D view. The tomography developed by the array provides very clear and easily identifiable anomalies, greatly assisting interpretation and analysis with all results automatically exported to 3D CAD.

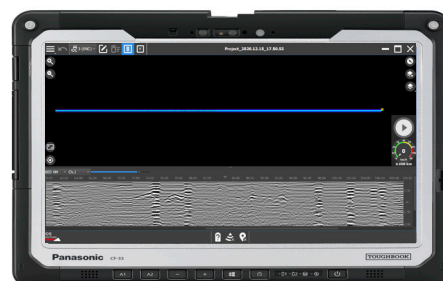

## Stream T Configuration:

Radar Control Unit

Array Solution

PC Data Logger with Acquisition Software

Configuration	# Antennas	# Channels
<b>Full</b> (Shallow+Deep)		17
<b>Mini</b> (Shallow or Deep)		6 Shallow 11 Deep

SYSTEM SPECIFICATIONS			
OVERALL WEIGHT	35 kg (83.7 lb) (Full) 22 Kg (48.5 lb) (Mini Deep) 18 Kg (39.6 lb) (Mini Shallow)	POSITIONING	Encoder, TPS
RECOMMENDED LAPTOP	Panasonic CF20	MAX ACQUISITION SPEED	Up to 60 km/h [37.3 mph]
POWER CONSUMPTION	38 W (during acquisition)	POWER SUPPLY	12V external battery
SYSTEM SIZE	Full: 700X1120x385mm (27.5x44.1x15.2in) (W, L, H) Mini Deep: 430X1120x385mm (16.9x44.1x15.2in) (W, L, H) Mini Shallow: 270X1120x385mm (10.6x44.1x15.2 in) (W, L, H)	WATERPROOFING	IP65
RADAR COVERAGE	960 mm (3.1 ft)	CERTIFICATION	EC, UKCA
